Question: Suppose that A and B are any two events such that, $P(A)=a, P(B)=b$ and $P\left[\left(A \cap B^{c}\right) \cup\left(A^{c} \cap B\right)\right]=m$, find $P(A \cup B)$.

Solution: From the Venn-diagram of $A \cup B$, we have, $A \cup B=A \cup\left(A^{c} \cap B\right)$ where $A$ and $A^{c} \cap B$ are disjoint events, hence $P(A \cup B)=P(A)+P\left(A^{c} \cap B\right)$. (1)

Similarly, $A \cup B=B \cup\left(A \cap B^{c}\right)$ where $B$ and $A \cap B^{c}$ are disjoint events, hence $P(A \cup B)=$ $P(B)+P\left(A \cap B^{c}\right)-(2)$

Adding (1) and (2), we get, $2 P(A \cup B)=P(A)+P\left(A^{c} \cap B\right)+P(B)+P\left(A \cap B^{c}\right)=P(A)+$ $P(B)+P\left[\left(A \cap B^{c}\right) \cup\left(A^{c} \cap B\right)\right]$, since $\left(A \cap B^{c}\right)$ and $\left(A^{c} \cap B\right)$ are disjoint.

Thus $2 P(A \cup B)=a+b+m$, which gives $P(A \cup B)=\frac{a+b+m}{2} .$.
